

Output

```
graph BT; A[ParameterEstimationReport  
taskReference: SldRef] --> B[Output]
```

The diagram illustrates a data flow where a **ParameterEstimationReport** object is converted into an *Output*. The **ParameterEstimationReport** box is divided into two sections: the top section contains the class name, and the bottom section contains the attribute `taskReference: SldRef`. A blue arrow points from this box to the *Output* box, which has a blue diagonal striped corner in the top right.

ParameterEstimationReport

taskReference: SldRef
