

Plot

```
classDiagram
    class Plot
    class ParameterEstimationResultPlot
    class WaterfallPlot
    Plot <|-- ParameterEstimationResultPlot
    Plot <|-- WaterfallPlot
```

The diagram illustrates a class hierarchy. At the top is the ***Plot*** class, which has a diagonal hatched pattern in its top-right corner. Below it are two subclasses: **ParameterEstimationResultPlot** and **WaterfallPlot**. Both subclasses inherit from **Plot**, as indicated by the hollow triangle arrows pointing from the subclasses to the base class. The **ParameterEstimationResultPlot** class has an attribute `taskReference: SldRef`. The **WaterfallPlot** class also has an attribute `taskReference: SldRef`.

ParameterEstimationResultPlot

taskReference: SldRef

WaterfallPlot

taskReference: SldRef
