

Range

+id : SId

VectorRange

+value : double [1..*]

```
classDiagram
    class Range {
        +id : SId
    }
    class VectorRange {
        +value : double [1..*]
    }
    Range <|-- VectorRange
```

The diagram illustrates a class hierarchy. At the top is the *Range* class, which has an attribute `+id : SId`. Below it is the **VectorRange** class, which has an attribute `+value : double [1..*]`. A vertical arrow with an open triangle head points from the **VectorRange** class to the *Range* class, indicating that **VectorRange** inherits from *Range*.
